### EXPERIMENT

**Title**

DIWALI CONTEST

## Description

Max is planning to take part in a Diwali contest at a Diwali Party that will begin at 8 PM and will run until midnight (12 AM) i.e., for 4 hours. He also needs to travel to the party venue within this time which takes him  $P$  minutes. The contest comprises of  $N$  problems that are arranged in order of difficulty, with problem 1 being the simplest and problem  $N$  being the most difficult. Max is aware that he will require  $5*i$  minutes to solve the  $i^{\text{th}}$  problem.

Your task is help Max find and return an integer value, representing the number of problems Max can solve and reach the party venue within the given time frame of 4 hours.

Note: Max will leave his home at exactly 8 PM to reach the party venue.

### Input Format:

input1: An integer value  $N$ , representing the total number of problems.

input2: An integer value  $P$ , Representing the time to travel in minutes from his home to the party venue.

### Example:

#### Input:

6

180

#### Output:

4

#### Explanation:

The amount of time left to solve the problems is  $4*60-180=60$  mins.

1st Problem - 5 mins, Time left =  $60-5=55$  mins

2nd Problem - 10 mins, Time left =  $55-10=45$  mins

3rd Problem - 15 mins, Time left =  $45-15=30$  mins

4th Problem - 20 mins, Time left =  $30-20=10$  mins

5th Problem - 25 mins

So he can solve only 4 problems as he is not left with 25 mins to complete 5th problem.

### Source Code:

```
N=int(input())
P=int(input())
lefttime=4*60-P
i=1
while i<=N and lefttime>=5*i:
    lefttime-=5*i
    i+=1
print(i-1)
```

## RESULT

5 / 5 Test Cases Passed | 100 %
